CC PINCTION: RUBISCO CATALYZES TWO REACTIONS: THE CARBOXYLATION OF CC CARBOULDES 1,5-BISPHOSPHATE, THE PRIMARY EVENT IN PHOTOSYNTHETIC CACAGON DIOXIDE FIXATION, AS WELL AS THE OXIDATIVE FRAGMENTATION OF THE PENNOSE SUBSTRATE IN THE PHOTORESPIRATION PROCESS. BOTH CC THE PENNOSE SUBSTRATE IN THE PHOTORESPIRATION AT THE SAME CC ACTIVE SITE.

CC ACTIVE SITE.

CC -1- CARALYTIC ACTIVITY: D-RIBULOSE 1,5-BISPHOSPHATE + CO(2) = 2 J-PHOSPHO-D-GLYCERATE + 2-PHOSPHOGLYCOLATE.

CC -1- SUBGULTULAR LOCATION: CHLOROPLAST.

CC -1- SUBGLIULAR LOCATION: CHLOROPLAST.

CC -1- SIMILARITY: BELONGS TO THE RUBISCO SMALL CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-NOV-1990 (Rel. 16, I

"A novel circadianly expressed Drosophila melanogaster gene dependent on the period gene for its rhythmic expression.";

EMBO J. 15:1625-1631(1996).

-i- FUNCTION: INVOLVED IN THE GENERATION OF BIOLOGICAL RHYTHMS (POTENTIAL). IN THE HEAD, OSCILLATES IN ABUNDANCE WITH A DAILY PEAK DURING EARLY NUGHT, EVEN UNDER CONSTANT DARKNESS. OSCILLATION IS DEPENDENT ON PERIOD (PER) FUNCTION.

-i- TISSUE SPECIFICITY: EXPRESSED IN HEAD, BUT NOT IN THE BODY.

-i- DEVELOPMENTAL STAGE: EXPRESSED IN 24 HOURS EMBRYO.

KATAOKA J. HABUKA N., MIYANO M., MASUTA C., KOIWAI A.;

"Nucleotide sequence of cDNA encoding alpha-luffin, a ribosome-
inactivating protein from Luffa cylindrica.";

Plant Mol. 18:1199-1202(1992).

-I- CATALYTIC ACTIVITY: ENDOMYDROLYSIS OF THE N-GLYCOSIDIC BOND AT O
SPECIFIC ADENOSINE ON THE 28S RNA.

-I- SIMILARITY: TO OTHER BACTERIAL AND PLANTS RIBOSOME-INACTIVATING
PROTEINS. BELONGS TO TYPE 1 RIP.

PROTEINS. BELONGS TO TYPE 1 RIP.
                                                                                                                                                                                                                       use by non-profit institutions as long as its content is in no way modified and this statement is not removed. FUNCTION: TRANSCRIPTION RACTOR THAT BINDS AND ACTIVATES THE FUNCTION: TRANSCRIPTION SPECIFIC GENES SUCH AS THYROGLOBULIN, PROMOTER OF THYROID SPECIFIC GENES SUCH AS THYROCLOBULIN. THE THYROID DIFFERNTIATION PHENOTYPE. MAY PL MAINTENANCE OF THE THYROID DIFFERNTIATION PHENOTYPE. MAY PL ROLE IN LUNG DEVELOPMENT AND SURFACTANT HOMEOSTASIS.
SUBCELLULAR LOCATION: NUCLEAR.
SUBCELLULAR LOCATION: NUCLEAR.
SINGLARTY: BELONGS TO THE NK-2 FAMILY OF HOMEOBOX PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CANFA

Submitted (MAY-1995) to the EMBL/Genbank/DDBJ databases.

-i- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS AND ACTIVATES THE PROMOTER OF THYROID SPECIFIC GENES SUCH AS THYROGLOBULIN, THYROFEROXIDASE, AND THYROTROPIN ROBEPTOR. CRICIAL IN THE MAINTENANCE OF THE THYROID DIFFERENTIATION PHENOTYPE. MAY PLAY ROLE IN LUNG DEVELOPMENT AND SUBFACTANT HOMEOSTASIS.

-i- SUBCELLULAR LOCATION. NUCLEAR.

-i- TISSUE SPECIFICITY: THYROID AND LUNG.
-i- SIMILARITY: BELONGS TO THE NK-2 FAMILY OF HOMEOBOX PROTEINS.

"The complete nucleotide sequence of the mouse thyroid-specific enhancer-binding protein (T/EBP) gene; extensive identity of the deduced amino acid sequence with the human protein.";

Biochim. Biophys. Acta 1261:304-306(1995).

-I- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS AND ACTIVATES THE PROMOTER OF THYROID SPECIFIC GENES SUCH AS THYROGLOBULIN, THYROFEOXIDASE, AND THYROTROFIN RECEPTOR. CRUCIAL IN THE MAINTENANCE OF THE THYROID DIFFERENTIATION PHENOTYPE. MAY PLAY A
